

TRAFFIC MANAGEMENT POLICY

TasSpan Civil Contracting is committed to providing a safe working environment not only for our own staff, but also for our customers, contractors and the public.

We will:

- Undertake a systematic consideration of the unique conditions encountered at each worksite and design a specific plan for the control of general traffic, construction plant, vehicles and pedestrian movements.
- Comply with all applicable Health and Safety and Traffic Management Legislation, Codes of Practice, Guidelines, manuals and Australian Standards.

To assist us in delivering our traffic management objectives we will:

- Communicate procedures and plans to all relevant employees and stakeholders as appropriate, to ensure they are aware of their obligations with respect to our operations and activities.
- Liaise with stakeholders through effective and practical communication channels.
- Provide health, safety and traffic risk management procedures that are relevant to the nature and scale of work undertaken.
- Conduct planned monitoring and measurement activities such as inspections and audits in order to evaluate our compliance with the planned arrangements as well as the effectiveness and relevance of the control measures.
- Ensure the continual education of our personnel with the required relevant training and regular updates on industry changes.

Andrew Larsen
